

	Questions	Answer	
Que. 4a	Do you expect that a user who has not logged in can see information about the Organization? Why or why not.	NO Because, to get the access of the organization information,user requires authorization token (Bearer) which user can get from browser's developer's tools > Network > authorization API call > header which requires login credentials to generatet the token but as mentioned in question,user not logged in.	
Que. 4b	You have a test case that specifies that the Organization name, location, and phone number is viewable and that the data is accurately displayed. Based on the API, what bug(s) do you file?	1. Phone number field is not available 2. Organization name is associated with its ID,duplicate name can be possible	
Que. 4c	You are testing viewing the Organization member information page and notice that there is an empty row in the member table. What bug(s) do you file?	1. numMember count is affected 2. memberId can not be get the associated details if name is missing 3. memberId is missing hence not bale to fetch the respective data	
Que. 4d	What other information would you like to see provided as part of the API definition?	organization's priviledged member's identification (like admin access) would be great to have as to get selective inforamtion.
